New Risks, New Welfare: The Transformation of the European Welfare State

Abstract
This book introduces the concept of new social risks in welfare state studies and explains their relevance to the comparative understanding of social policy in Europe. New social risks arise from shifts in the balance of work and family life as a direct result of the declining importance of the male breadwinner family, changes in the labour market, and the impact of globalization on national policy-making. They differ from the old social risks of the standard industrial life-course, which were concerned primarily with interruptions to income from sickness, unemployment, retirement, and similar issues. New social risks pose new challenges for the welfare policies of European countries, such as the care of children and the elderly, more equal opportunities, the activation of labour markets and the management of needs that arise from welfare state reform, and new opportunities for the coordination of policies at the EU level. The book includes detailed and up-to-date case studies of policy development across these areas in the major European countries. These studies, written by leading experts, are organized in a comparative framework which is followed throughout the book. They highlight the way in which national welfare state regimes and institutional arrangements shape policy-making to meet new social risks. A major feature of this volume is the analysis of developments at the EU level and their interaction with national policies. The EU has been largely unsuccessful in its interventions in old social risk policy, but appears to have more success in its attempts to coordinate policy for new social risks. Experience here may provide lessons for future developments in EU policy-making. The comparative framework of the book seeks to inform an understanding of the development of new social risks in Europe and of the particular political opportunities and challenges that result. It provides an original analysis of pressing issues at the forefront of European welfare policy debate and locates it at the heart of current theoretical debates.

The comparative welfare state literature has taken some important turns in the past decades, moving first from a focus on the causes of its growth to studies of retrenchment. Lately, scholarship has become more preoccupied with welfare state adaptation to the new risk and needs structure. This book falls squarely in the latter camp and includes European scholars, such as Bruno Palier, Guilliano Bonoli, and Peter Taylor-Gooby, who have been exploring this theme for some years now. Export citation Request permission. Copyright. The welfare state may be seen as a particular trademark of the European social model. An extensive set of social and institutional actors provides protection against negative consequences of common life-course risks, for example by offering economic support in periods of hardship or by ensuring access to care and services. New forms of risk have arisen. These are related to precarious labour markets and shifting household situations and have taken different shapes across welfare states. Rising concerns about welfare state demographic sustainability and the slowly growing influence of European Union
standards and regulations of welfare policies are other common challenges across the continent. First we have many historical works about welfare state genesis, expansion and transformation without quantification of it, but many researchers want to be more scientific. The measurement of complex socio-political phenomena is of course very difficult and controversial task. When researchers agree on comparative indicators they have chance to gather empirical results for different countries. This is base to infer empirical classifications of the welfare state. The most famous of them is proposed by Gosta Esping-Andersen: three worlds of welfare capitalism. History, indicators and classification New social risks pose new challenges for the welfare policies of European countries, such as the care of children and the elderly, more equal opportunities, the activation of labor markets and the management of needs that arise from welfare state reform, and new opportunities for the coordination of policies at the EU level. The book includes detailed and up-to-date case studies of policy development across these areas in the major European countries. These studies, written by leading experts, are organized in a comparative framework which is followed throughout the book. This book develops understanding of current welfare state transformations by directing attention to the new social risks that result from the transition to post-industrial society.
