## Volume 5A Thermal Spray Technology

Prepared under the direction of the  
ASM International Handbook Committee and the  
ASM Thermal Spray Society

### Volume Editor

**Robert C. Tucker, Jr.**, The Tucker Group

### Division Editor

Existing and New Market Opportunities in  
Thermal Spray Applications  
**Mitchell R. Dorfman**, Sulzer Metco

### ASM International Staff

**Victoria Burt**, Content Developer  
**Steven Lampman**, Content Developer  
**Amy Nolan**, Content Developer  
**Karen Marken**, Senior Managing Editor  
**Susan Sellers**, Editorial Assistant  
**Madrid Tramble**, Senior Production Coordinator  
**Patty Conti**, Production Coordinator  
**Diane Whitelaw**, Production Coordinator  
**Scott D. Henry**, Senior Manager, Content Development  
**Bonnie R. Sanders**, Manager of Production

This Volume is a collective effort involving hundreds of technical specialists. It brings together a wealth of information from worldwide sources to help scientists, engineers, and technicians solve current and long-range problems.

Great care is taken in the compilation and production of this Volume, but it should be made clear that NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE GIVEN IN CONNECTION WITH THIS PUBLICATION. Although this information is believed to be accurate by ASM, ASM cannot guarantee that favorable results will be obtained from the use of this publication alone. This publication is intended for use by persons having technical skill, at their sole discretion and risk. Since the conditions of product or material use are outside of ASM's control, ASM assumes no liability or obligation in connection with any use of this information. No claim of any kind, whether as to products or information in this publication, and whether or not based on negligence, shall be greater in amount than the purchase price of this product or publication in respect of which damages are claimed. THE REMEDY HEREBY PROVIDED SHALL BE THE EXCLUSIVE AND SOLE REMEDY OF BUYER, AND IN NO EVENT SHALL EITHER PARTY BE LIABLE FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES WHETHER OR NOT CAUSED BY OR RESULTING FROM THE NEGLIGENCE OF SUCH PARTY. As with any material, evaluation of the material under end-use conditions prior to specification is essential. Therefore, specific testing under actual conditions is recommended.

Nothing contained in this Volume shall be construed as a grant of any right of manufacture, sale, use, or reproduction, in connection with any method, process, apparatus, product, composition, or system, whether or not covered by letters patent, copyright, or trademark, and nothing contained in this Volume shall be construed as a defense against any alleged infringement of letters patent, copyright, or trademark, or as a defense against liability for such infringement.

Comments, criticisms, and suggestions are invited, and should be forwarded to ASM International.

# Foreword

---

---

The inclusion of Volume 5A in the *ASM Handbook* series marks the first time a publication formally sponsored by an ASM International affiliate society has been incorporated into the series.

The Thermal Spray Society (TSS) published the *Handbook of Thermal Spray Technology* in 2004 under direction of the TSS Training Committee. In 2011, the TSS decided to update and revise the book at the same time ASM International wanted to expand *ASM Handbook*, Volume 5, *Surface Technology*. All involved agreed the quality of the TSS book was appropriate for the *ASM Handbook* series.

*ASM Handbook*, Volume 5A, *Thermal Spray Technology* provides an introduction to modern thermal spray processes including plasma spray, high velocity oxy-fuel, and detonation gun deposition; and a description of coating properties, their wear, corrosion and thermal barrier characteristics. Thermal spray technology helps to sustain our way of life by reducing energy consumption, providing environmental benefits, supporting human comfort, and reducing material waste. Development of more reliable and robust equipment technologies, along with improved particle diagnostic instruments, will help to move the thermal spray process from guesswork to more of a science, giving designers and end users more confidence in the long-term manufacturing capabilities of the thermal spray process. Applications already experiencing such growth include industrial gas turbines, biomedical devices, electronics and semiconductors, automotive, and alternative energy (electrical generation, heating, and transportation).

ASM International is grateful for the work of volunteer editors, authors, and reviewers who dedicated their time and expertise, particularly Robert C. Tucker, Jr. and Mitchell R. Dorfman, whose extensive leadership and knowledge of the thermal spray field have been critical to this project.

ASM International is also thankful to members of the American Welding Society's C2 Committee on Thermal Spray who served as technical reviewers.

# Preface

---

---

Thermal spray is a generic term for a group of coating processes used to apply metallic, ceramic, cermet, and some polymeric coatings for a broad range of applications. It is one of the most versatile technologies of the various coating technologies, capable of depositing virtually any material that does not decompose on heating to near or slightly above its melting point or is sufficiently malleable to be deposited at high velocity. Moreover, the coating material can be deposited on most surfaces including metallic, ceramic, many polymeric, and others, without significantly heating, and therefore changing the properties, of that surface. Thermal spray coatings have found applications in most industries, providing economical solutions to a host of wear, corrosion, thermal, and other problems or providing other unique characteristics to a surface.

This *ASM Handbook*, Volume 5A, is intended to provide basic information on thermal spray technology for engineers and technicians new to the field, as well as to serve as a primary reference for experienced practitioners.

It should also be a valuable resource for materials, mechanical, aero, chemical, and other design and operations engineers, as well as others seeking solutions to surface engineering problems such as wear, corrosion, thermal or electrical conduction or insulation, or special surface functions such as lubrication, friction, or catalysis.

This *ASM Handbook*, Volume 5A, is an extensive revision and updating of the *Handbook of Thermal Spray Technology* prepared under the direction of the Training Committee of the ASM Thermal Spray Society and published by ASM International in 2004. It is the result of a great deal of time and effort by the TSS member volunteers who served as editors and authors of its divisions, and they are to be highly commended for their commitment and dedication to the project. All of the divisions were peer reviewed by experts in their various fields, and they too are to be commended for their efforts as are the several staff members involved in editing and compiling Volume 5A.

R.C. Tucker, Jr., PhD, FASM, TS HoF  
Editor

# Policy on Units of Measure

---

---

By a resolution of its Board of Trustees, ASM International has adopted the practice of publishing data in both metric and customary U.S. units of measure. In preparing this Handbook, the editors have attempted to present data in metric units based primarily on *Système International d'Unités* (SI), with secondary mention of the corresponding values in customary U.S. units. The decision to use SI as the primary system of units was based on the aforementioned resolution of the Board of Trustees and the widespread use of metric units throughout the world.

For the most part, numerical engineering data in the text and in tables are presented in SI-based units with the customary U.S. equivalents in parentheses (text) or adjoining columns (tables). For example, pressure, stress, and strength are shown both in SI units, which are pascals (Pa) with a suitable prefix, and in customary U.S. units, which are pounds per square inch (psi). To save space, large values of psi have been converted to kips per square inch (ksi), where 1 ksi = 1000 psi. The metric tonne ( $\text{kg} \times 10^3$ ) has sometimes been shown in megagrams (Mg). Some strictly scientific data are presented in SI units only.

To clarify some illustrations, only one set of units is presented on artwork. References in the accompanying text to data in the illustrations are presented in both SI-based and customary U.S. units. On graphs and charts, grids corresponding to SI-based units usually appear along the left and bottom edges. Where appropriate, corresponding customary U.S. units appear along the top and right edges.

Data pertaining to a specification published by a specification-writing group may be given in only the units used in that specification or in dual units, depending on the nature of the data. For example, the typical yield strength of steel sheet made to a specification written in customary U.S.

units would be presented in dual units, but the sheet thickness specified in that specification might be presented only in inches.

Data obtained according to standardized test methods for which the standard recommends a particular system of units are presented in the units of that system. Wherever feasible, equivalent units are also presented. Some statistical data may also be presented in only the original units used in the analysis.

Conversions and rounding have been done in accordance with IEEE/ASTM SI-10, with attention given to the number of significant digits in the original data. For example, an annealing temperature of 1570 °F contains three significant digits. In this case, the equivalent temperature would be given as 855 °C; the exact conversion to 854.44 °C would not be appropriate. For an invariant physical phenomenon that occurs at a precise temperature (such as the melting of pure silver), it would be appropriate to report the temperature as 961.93 °C or 1763.5 °F. In some instances (especially in tables and data compilations), temperature values in °C and °F are alternatives rather than conversions.

The policy of units of measure in this Handbook contains several exceptions to strict conformance to IEEE/ASTM SI-10; in each instance, the exception has been made in an effort to improve the clarity of the Handbook. The most notable exception is the use of  $\text{g}/\text{cm}^3$  rather than  $\text{kg}/\text{m}^3$  as the unit of measure for density (mass per unit volume).

SI practice requires that only one virgule (diagonal) appear in units formed by combination of several basic units. Therefore, all of the units preceding the virgule are in the numerator and all units following the virgule are in the denominator of the expression; no parentheses are required to prevent ambiguity.

## Officers and Trustees of ASM International (2012–2013)

### **Gernant E. Maurer**

President  
Carpenter Technology Corporation

### **C. Ravi Ravindran**

Vice President  
Ryerson University

### **Christopher C. Berndt**

Immediate Past President  
Swinburne University of Technology

### **Thomas Passek**

Managing Director  
ASM International

### **Robert Fulton**

Treasurer  
Hoeganaes Corporation (Retired)

### **Iver Anderson**

Ames Laboratory

### **Mitchell Dorfman**

Sulzer Metco (US), Inc.

### **Diana Essock**

Metamark Inc.

### **James C. Foley**

Los Alamos National Laboratory

### **David U. Furrer**

Pratt & Whitney

### **Jeffrey A. Hawk**

National Energy Technology  
Laboratory

### **William J. Lenling**

Thermal Spray Technologies Inc.

### **Vilupanur A. Ravi**

California State Polytechnic University

### **Linda S. Schadler**

Rensselaer Polytechnic Institute

### *Student Board Members*

### **Jennifer L. Breidenich**

Georgia Institute of Technology

### **Gregory A. Vetterick**

Drexel University

### **Blake Whitley**

The University of Alabama

---

## Members of the ASM Handbook Committee (2012–2013)

### **Joseph W. Newkirk**

Chair 2012–  
Member 2005–  
Missouri University of Science & Technology

### **George Vander Voort**

Vice Chair 2012–  
Member 1997–  
Vander Voort Consulting

### **Craig D. Clauser**

Immediate Past Chair Member 2005–  
Craig Clauser Engineering Consulting

### **Jeffrey A. Hawk**

Board Liaison and Member  
Member 1997–  
U.S. Department of Energy

### **David E. Alman (2011–)**

National Energy Technology Laboratory

### **Scott W. Beckwith (2010–)**

BTG Composites Inc.

### **Rodney R. Boyer (2010–)**

### **Sarup K. Chopra (2007–)**

Consultant

### **Narenra B. Dahotre (2012–)**

University of North Texas

### **Craig V. Darragh (1989–)**

The Timken Company (Retired)

### **Jon L. Dossett (2006–)**

Consultant

### **Alan P. Druschitz (2009–)**

Virginia Tech

### **Donald E. Duvall (2010–)**

Engineering Systems Inc.

### **Gerald S. Frankel (2010–)**

Ohio State University

### **Larry D. Hanke (1994–)**

Materials Evaluation and Engineering Inc.

### **Paul D. Jablonski (2011–)**

U.S. Department of Energy

### **Kent L. Johnson (1999–)**

Applied Materials Technology Inc.

### **Kang N. Lee (2010–)**

Rolls Royce Corporation

### **Brett A. Miller (2011–)**

IMR Metallurgical Services

### **Dale Newbury (2010–)**

---

## Thermal Spray Society Board (2012–2013)

### **Luc Pouliot**

President  
Tecnar Automation Limited

### **John O. Hayden**

Vice President  
Hayden Corporation

### **Douglas G. Puerta**

Secretary/Treasurer  
IMR-KHA-Portland

### **Charles M. Kay**

Immediate Past President  
ASB Industries

### **Mitchell R. Dorfman**

ASM Board Liaison  
Sulzer Metco (US) Inc.

### **Linda Schadler**

ASM Board Liaison  
Rensselaer Polytechnic Institute

### **Ann Bolcavage**

Rolls-Royce Corporation

### **Masahiro Fukumoto**

Toyohashi University of Technology

### **Aaron C. Hall**

Sandia National Labs

### **Robert A. Miller**

Kennametal Stellite

### **Sanjay Sampath**

State University of New York

### **Armelle Vardelle**

ENSIL, University of Limoges

### **Robert Vassen**

Forschungszentrum Julich GmbH

### **Dongming Zhu**

NASA - Glenn Research Center

### **Dr. Y.C. Lau**

Liaison to the Board  
General Electric

## Chairs of the ASM Handbook Committee

**J.F. Harper**

(1923–1926) (Member 1923–1926)

**W.J. Merten**

(1927–1930) (Member 1923–1933)

**L.B. Case**

(1931–1933) (Member 1927–1933)

**C.H. Herty, Jr.**

(1934–1936) (Member 1930–1936)

**J.P. Gill**

(1937) (Member 1934–1937)

**R.L. Dowdell**

(1938–1939) (Member 1935–1939)

**G.V. Luerssen**

(1943–1947) (Member 1942–1947)

**J.B. Johnson**

(1948–1951) (Member 1944–1951)

**E.O. Dixon**

(1952–1954) (Member 1947–1955)

**N.E. Promisel**

(1955–1961) (Member 1954–1963)

**R.W.E. Leiter**

(1962–1963) (Member 1955–1958, 1960–1964)

**D.J. Wright**

(1964–1965) (Member 1959–1967)

**J.D. Graham**

(1966–1968) (Member 1961–1970)

**W.A. Stadler**

(1969–1972) (Member 1962–1972)

**G.J. Shubat**

(1973–1975) (Member 1966–1975)

**R. Ward**

(1976–1978) (Member 1972–1978)

**G.N. Maniar**

(1979–1980) (Member 1974–1980)

**M.G.H. Wells**

(1981) (Member 1976–1981)

**J.L. McCall**

(1982) (Member 1977–1982)

**L.J. Korb**

(1983) (Member 1978–1983)

**T.D. Cooper**

(1984–1986) (Member 1981–1986)

ASM Handbook, Volume 9: Metallography and Microstructures. G.F. Vander Voort, editor, p493-512. DOI: 10.1361/asmhba0003752. Copyright © 2004 ASM International. All rights reserved. www.asminternational.org. 494 / Metallographic Techniques. Fig. 5 Extensive mechanical twinning was observed in high-purity, electron-beam-melted zirconium. To assemble the program, type `nasm -f elf hello.asm`. If there is any error, you will be prompted about that at this stage. Otherwise an object file of your program named `hello.o` will be created. To link the object file and create an executable file named `hello`, type `ld -m elf_i386 -s -o hello hello.o`. Execute the program by typing `./hello`. If you have done everything correctly, it will display `Hello, world!` on the screen. TUTORIALS POINT Simply Easy Learning. CHAPTER. 4. On behalf of the ASM Handbook Committee, it is a pleasure to introduce this fully revised and updated edition of Volume 7, Powder Metal Technologies and Applications as part of the ASM Handbook series. Since the first publication of Volume 7 in 1984 as part of the 9th Edition Metals Handbook, substantial new methods, technologies, and applications have occurred in powder metallurgy.
