Abstract

Much has been written and published and the world has repeatedly been warned by many eminent authorities of an impending energy shortage for the relatively short term (1985-1990)... However, increased demands on available domestic crude supplies dictates that a basic reassessment of energy resources available to the United States be undertaken... Gradually then the Texas economy began a shift from a largely agricultural base to one heavily dependent on oil, primarily due to the fossil hydrocarbon reserves being periodically discovered and developed under the borders and waters of Texas, and hungrily demanded by a growing nation. ... These basic pre-conditions then set the stage for the questions that Texas, its energy producers, its citizens and its leadership must attempt to answer if continued healthy economic growth is sustained in the state throughout the remainder of the twentieth century. A careful study of the text and charts in the following pages of this brief interim report will permit the reader to focus on our economic dilemma and to draw specific conclusions on the action required to keep the Texas economy health and competitive and maintain our environment so succeeding generations can enjoy a quality life.

Interim financial reports are declared at various periods providing evidence about the firm's performance at different intervals during the accounting period. Public listed companies come up with quarterly financial numbers, Real estate firms come up with their numbers on a Project basis as and when these projects are completed. Investors don't wait for the annual reports that are declared at the end of the fiscal year. With companies relying not only on organic but also on inorganic growth, annual data is insufficient in evaluating developments and earnings projection of the industry and the firm. In such a dynamic business environment, interim reports offer a better periodic snapshot to the shareholders. During the report-ing period, Kalmar also introduced a new medium range terminal tractor offering better ergonomics and driver comfort as well as lower noise levels than earlier models. During the first quarter, Kalmar launched a new, fully-automated shuttle carrier that is able to pick, place and transport containers between ship-to-shore (STS) and yard stacking cranes without a driver. In March, MacGREGOR opened a new offshore equipment pro-duction unit in Tianjin, China, approximately half of its produc-tion being delivered to various parts of China. The adoption of the interpretation does not have a material effect on the interim financial statements.
