## Canada's Forests

by Ken Drushka

Looking back over 10,000 years, from the end of the last glacial period to the beginning of the twenty-first century, Ken Drushka explores how the human use of our forests has changed and combines, for the first time, an overall description of the ten forest regions of Canada with an overview of their historical uses and their current condition.

*Canada's Forests* analyses the changes in human attitudes towards the forests, detailing the rise of the late nineteenth-century conservation movement and its subsequent decline after World War I, the interplay between industry and government in the development of policy, the adoption of sustained yield policies after World War II, and the recent embracing of concepts of sustainable forest management in response to environmental concerns. Drushka argues that, despite centuries of use, Canadian forests retain their vitality and integrity.

Ken Drushka has published numerous books on forestry, including *Stumped*, *Three Men and a Forester*, *Working in the Woods*, *Touch Wood*, *In the Bight*, and *HR: A Biography of H.R. MacMillan* and has written weekly newspaper columns on forestry for the *Vancouver Sun* and *Business in Vancouver*, as well as numerous magazine articles.

*"Drushka has done an admirable job of synthesizing the material in a way that will be of value to a general readership. I am impressed with the way [his] account addresses main themes in Canadian history; it should serve well as an introduction to Canadian forest history."*

Uploaded by station15.cebu on July 4, 2019. It is a story to teach children how to care for the forest and be responsible of their litter to avoid destruction of nature. This tale is a part of our Bedtime Stories collection. The boy never again saw that blackboard, but now, every time he goes to the countryside with his family , he remembers that adventure and is the first to pick up any litter. And he is sure to remind the others that anything left lying in the woods can do more damage to the animals than they ever would have suspected. Forest Society and Colonialism. The British colonizers were worried that Indian farmers were destroying the forests with their agricultural practices. They wished to cultivate the forests themselves and perform scientific forestry. So they formed these forest society and made various laws to restrict the use of these forests by locals but continued their commercial exploitation of these forests. Let us take a look. Deforestation and Rise of Commercial Forestry.
