Signatura: 639.2.081.73, M-679.

Autor: Mitson, R.B.

Título: Fisheries sonar (incorporating "Underwater observation using sonar" by D.G. Tucker).

P.imprenta: Fishing news book, Farnham. GB. 1983. 287 p.

Descriptor: echo-surveys; acoustics-; fish-detection; sonar-; sound-waves; marine-fisheries; inland-fisheries.

Notas: Incl. bibliogr.: 41 ref., and English glossary of 102 terms..

Resumen: This book deals will all aspects of modern echo-sounding and sonar as used by those concerned with the exploitation and management of fisheries. From the basic physics, through the operation of the systems, practical aspects are illustrated withmany diagrams and photographs, including a large section on paper recordings and colour sounder display of fish traces. The applications described range from a small portable echo-sounder for freshwater fishing in shallow water to the Deep Tow echo-sounder used at 2500m depth. It includes some acoustic images of underwater scenes and the latest methods for tracking fish.
