Building Powerful Platforms with Windows CE. Jan 2001. J Y Wilson. A Havewala. CE es una versi3n reducida de la plataforma de Windows, dise±ada para su utilizaci3n en computadoras de bolsillos y dispositivos incrustados; incluye una interfaz grÁfica de usuario opcional. En este libro se explica c3mo manejar la memoria, almacenamiento y temas relativos a la energÁa; c3mo permitir la comunicaci3n con redes, computadoras personales y otros dispositivos; c3mo usar la plataforma compacta .NET para construir aplicaciones independientes de la unidad central de procesamiento; c3mo desarrollar aplicaciones para computadoras personales de bolsillo y c3mo crear extensiones personal Platform Builder for Windows CE 6.0 plugs into Visual Studio 2005, but the latest and greatest version of Visual Studio that supports "smart device" development is Visual Studio 2008 (unfortunately not Visual Studio 2010, yet?!). Most application developers will use Visual Studio 2008 for smart device development, so that's what your SDK should support in most cases. Orca is in the Microsoft Windows SDK which should be on your machine if you've installed Visual Studio. Take a look in your "Program Files" folder and see if there's a folder "Microsoft SDKs". Of course it would be nice to be able to build one SDK that will install without any problems in any version of Visual Studio that supports smart device development. Powerful graphics, powerful alarm management, powerful historicals with relational DB management which can be integrated on the net, trends, recipes, scripts, sending SMS. All ready to be used in a powerful but simple programming environment such as Movicon. Cost Reductions. The Windows CE platform is rather different to the Win32 platform as described below. You must first consider that WindowCE, like embedded systems, is much more restricted both on the performance side and with the amount of memory space available. Features In order to verify some of the device's features, you can access the "System" group from the "Control Panel" to get information on the following Only the Windows OS is different. Whenever I try and build the solution in VS 2008 it immediately fails with the following error: PBSpawn: Error: Current process is running in a job that does not allow breakaway. Unable to create child process in new job. There is nothing in the Event Viewer. I've turned off UAC; firewall; granted full permissions to the C:\WinCE700 folder, VS 2008 folder and the MS Platform Builder. No joy. This error is not listed anywhere on the internet. 2 Brief Biography Lead software engineer for integration of CE on various custom platforms Various publications on Windows CE system development Coauthor of "Building Powerful Platforms With Windows CE" published by Addison-Wesley in Q4 1999 Microsoft Embedded MVP Developer of Windows 3.x/9x/NT device drivers. 3 Agenda Introduction to CE OS Architecture Steps to adaptation for custom platforms Tool-chain Real-time capabilities and limitations Licensing options. 4 Windows CE (In a Nut Shell) 32 bit, preemptive, multithreaded "Real-Time" Used for implementation of PocketPC devices (PDAs, Phone E
