A bibliography is included for those who wish to pursue the subject further. For example, the use of the term UTM is commonly abused. The publication by the Joint Committee of the American Congress on Surveying and Mapping and the American Society of Civil Engineers should provide a clear definition. Finally, and maybe most importantly for the adoption of these standards, we appeal to managers and contract implementers in the industry. In addition, since the SEG is committed to the process of metrication, the committee endorses the increasing use of metric units for data exchange whenever appropriate. The seg element may be used at the encoder's discretion to mark any segments of the text of interest for processing. One use of the element is to mark text features for which no appropriate markup is otherwise defined. Another use is to provide an identifier for some segment which is to be pointed at by some other element i.e. to provide a target, or a part of a target, for a ptr or other similar element. Example.
