Abstract

My principal research question is: what future/s might there be for the book as it shifts away from paper volumes and into an ebook protocol, as regards marginal epistemologies, inclusivity, multiple authors, interdisciplinarity and alternative narratives? My research takes the form of both a thesis and a research-creation EPUB3 ebook. I chose the subject of bees as the content of the book. This subject offered me both an alternative narrative and a way to showcase the capabilities of the EPUB. Working with disciplines of Design, Film and Computer Science, I traced a trajectory through the history of the printed book to the present day finding a natural place for the self-published ebook. The thesis speculates on the genesis of the ebook as a recuperative medium in the evolution of the knowledge commons. It navigates a path toward progressive accessibility standards coexisting with a visual design paradigm.

An examination of the literature from 2010 to the present reveals a variety of academic library mobile initiatives. In addition to creating mobile Sample PDF. Along with the shift from print to digital formats, information technologies are significantly affecting today's libraries. New technologies and Sample PDF. In 2009, the University of Idaho embarked on an ambitious five year plan to redesign library space and build community through increased Sample PDF. Making Connections, Building Community: Applications for Developing Library Allies. Pin It Multiple exposure of film is the hallmark of a bad photography. German photographer Stephanie Jung, on the other hand, took a different view on this old adage. She took a glaring flaw, and turned it into an art form. Check out this arresting series of images by photographer Christian Ruhm. The German artist created these wibbly wobbly pieces with multiple exposures (no post-processing work here) — a simple photographic technique that gives rise to a striking take on some of the world's most iconic architectural landmarks. Part of the Lecture Notes in Computer Science book series (LNCS, volume 8897). Abstract. The long research studies on the use of computer technology to

decipher and determine the individual characteristics of handwriting have led to progress in some trends and set limits in others. It is possible to introduce and make use of enough handwriting features which are calculable and may serve as reliable criteria when the author of a particular writing is automatically confirmed or rejected.
