

South African red data book – Birds

Brooke, RK

URI: <http://hdl.handle.net/10204/2015>

Date: 1984-12

Abstract:

Red data sheets are provided for 102 species of birds that breed on the South African mainland and a further six species for the oceanic Prince Edward islands. Species are listed according to the established IUCN criteria of extinct, endangered, vulnerable, rare, out of danger or indeterminate. Each data sheet is accompanied by a list of published sources and most by a distribution map. Of the 108 species, two are judged to be locally extinct and five have been allocated to the endangered category, also on a local basis. Twenty one species are vulnerable, 44 species rare, one species out of danger and 35 species are as yet indeterminate. Indications of past research effort and of future needs in both research and conservation management are provided, together with a comprehensive rare species bibliography.

About this book. South African Red Data Book: Butterflies, produced in cooperation with the Lepidopterists' Society of Africa, fulfils the need for a revised South African Red Data Book for butterflies as well as for an improved pro- posed Red List of butterflies in South Africa. It highlights the presence of threatened species, provides a rationale for the listing of such taxa, and then identifies the actual threats facing these butterfly species. Customer Reviews.
