7. Globalization and science: Although globalization contributes remarkably to new scientific revolutions in many fields including computer and space sciences, these revolutions are accompanied by new sciences that may be used for immoral purposes or to damage the dignity of man whom the Almighty God honors. Example of these sciences is Genetic Engineering Science, which leads to the emergence of Cloning Science. 8. Globalization and societal structures: The free economy and the development of technology have negative impact on laborers. As known, twenty percent of the world population is prod This science includes many other and is also the most important in establishing contacts and relations with each other. The geopolitical situation in the modern world is a changeable factor. There are several reasons why there are these changes: The growing influence of one superpower; The globalization of the world economy; Strengthening (weakening) of third States; The attempt of the U.S. and its NATO allies to pursue its geopolitical interests by military intervention. Most of the wars and international conflicts in the world occur because of the characteristics (differences) of culture (religion), history of the peoples of the conflicting countries. Synthesizing decades of sociological work at Stanford University on the development of the modern nation-state system since World War II, contributors argue that striking similarities increasingly characterize nation-state structures and policies, suggesting that countries across different domains are following the same models or scripts of what a nation-state ought to be. Center on Democracy, Development and the Rule of Law is housed in the Freeman Spogli Institute for International Studies. Search form. Research. Institutionalism and Globalization Studies. Start by marking “Science in the Modern World Polity: Institutionalization and Globalization” as Want to Read: Want to Read saving… Want to Read. The authors argue that the triumph of science across social domains and around the world is due to its institutionalized cultural authority rather than to its instrumental utility for societies or for their dominant elites. Thus, following the Stanford approach to institutional theory in sociology, the book emphasizes the symbolic or religious role science plays in the modern world. ...more. Get A Copy.
